Cyclone Air Equipment - Cyclonettes - Cyclone Dust Collectors - Centrifugal Collectors - Cyclonic Separation - Spiral

Cyclone Separator - Cyclonette - Dust Collector - Particle Separators - Cyclonic

Cyclone Separators are manufactured in many different sizes. These cyclones provide an efficient and cost-effective means of separating particulates (material) from air in a pressure or vacuum pneumatic conveying airstream. Cyclones operate by generating a vortex of particulate laden air. Centrifugal force pushes the particulates toward the outer cyclone wall where they lose velocity and spiral downward to the discharge. The relatively particulate-free air is then exhausted through the clean air discharge port which is attached to the top of the cyclone. Efficiency of this process depends on the material being conveyed, material/air flow rates, and cyclone design. Typical applications for cyclones are at material processing points, such as sifter stations, pulverizers, and liquid mixers.

SPEC has provided and installed complete turnkey flour and sugar systems incorporating components from companies like Mac Equipment, Reimelt Corporation, Smoot, Schenck AccuRate, Horizon Systems, (NBE) National Bulk Equipment, Carman Industries, Great Western Mfg., Bray Controls and Shick Tube-Veyor. *Please call us for your pneumatic conveying application.*
